Personas

1

Joana Lavigne

22 years old, student

2

Ariana Grande

20 years old, student

3

Ruth Bennet

54 years old, vinegar producer

4

Martim Jackson

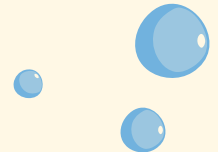

19 years old, student

Scenarios

Joana Lavigne

Joana Lavigne, 22 years, music student at DECA, UA, is always busy. She needs to go regularly wash her clothes, but she hates to wait on queues. This way, she uses SmartWash to check if there are any self-service laundries with available washing machines.

Scenarios

Ariana Grande

Ariana is a 20 year-old student of Biomedic Sciences in UA. She has a washing machine at home, where she washes her clothes, but drying them at home during Aveiro rainy days is nearly impossible. Therefore, she prefers to dry them at self-service laundries, and so, she uses SmartWash to check if there are any laundries with available dryers.

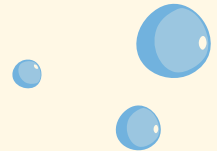

Scenarios

Ruth Bennet

Ruth is a 54 year-old vinegar producer who just came home from her 2-week vacation to Algarve with her family. She brings all their clothes to wash, and she thinks it's best if they're all washed at the same time, but for that she needs 3 separate machines. To solve this, she uses SmartWash to see if any laundry has 3 available washing machines.

Scenarios

Martim Jackson

Martin is a 19 year-old Trajado. He went to the “Desfile do Enterro” with his *traje*, and this resulted in his *gabão* being very dirty and he needed to clean it urgently. To do so, he reserves a washing machine for the next day, using SmartWash.

Task Analysis

1

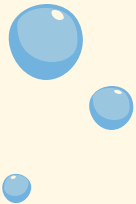

Check laundries that have free washers/dryers in a certain area

2

See how many washers or dryers are free in each laundry

3

Reserve the washing machines or dryers for a specific time

Task Analysis

Functional Requirements

Laundry Search and Details

The platform should allow users to find nearby laundries, with details about services and hours.

Machine Reservations

The platform should allow users to reserve machines at selected laundries.

Order History

The system should allow users to check the state of their reservations.

Map view

The system must integrate a map view that shows nearby laundries.

Functional Requirements

Payment Options

The platform should allow multiple payment methods.

Laundry Transportation

The platform should allow users to request delivery and pickup of laundry items.

Registration and Login

The platform should allow users to register and login to their accounts securely.

Non-Functional Requirements

Multilingual Support

The system must support multiple languages.

Data Security

The system must assure user data security.

Clear Visibility of Icons and Buttons

The icons and buttons in the system must be clearly visible.

Fast and Responsive Platform

The platform should ensure a smooth user experience.

Non-Functional Requirements

Scability

The system should be capable of handling user loads as the user base grows.

Accessibility

The system must ensure that the application is accessible to users with disabilities.

Error Handling

The system must implement robust error handling .

Costumization

The system must provide options for users to customize their application.

Conclusion
